

I came to Dr. Fahramand after almost four years of doctors not knowing what to tell me. I had this pain down my knees to my feet to my ankles. I walked with a cane all of 1994 and I was only 20 years old. The doctors told me it was arthritis of some sort and that all I could do was use pain medication. Finally at the end of the year (1994) it slowly went away. But in October of 1997 the pain came back but this time it was in my right hip. Again I was using a cane or crutches and finally ended up in bed for a week because the pain was so horrible. It took me forever to get dressed each day because I was so weak. I went to a chiropractor after the doctors couldn't help me, but that did no good. We were referred to Dr. Fahramand in January 1998 and decided, with a lot of prayer, that we would try. Within 4 treatments my hip and pain were so much better. And it turned out to be a mineral/sulphur deficiency. I can actually wear tennis shoes
