Dr. Salar Farahmand
Encino Acu-Med
Encino, CA

Dear Dr. Farahmand:

This letter is to thank you for the wonderful results you have provided myself, my family and several of my friends. When I first came to you, I had a very sore shoulder that neither my medical doctors nor my chiropractor could help me with. After a few treatments from you, my shoulder pain has never returned! The following year, as I entered menopause, I developed a painful case of what the medical doctors referred to as cystitis. After many tests and several treatments, the doctors said there was nothing more they could do for me except operate either by giving me a hysterectomy or a bladder operation. Again, I came to you, and after a few months you were able to help me get rid of this condition, which has also never returned. At the present time, we are making a great deal of progress on a condition that the medical doctors have diagnosed as Irritable Bowel Syndrome, which may be something entirely different, and I have no doubt that I will soon be permanently rid of this already improved condition.

I also brought my mother to your office, and you have been able to help her with many age-related issues. At the time I was bringing my mother, one of my brothers, who suffers from schizophrenia, started having serious epileptic attacks. Since your treatment of him, his seizures have completely stopped for over 9 months now. There has also been improvement in his mental condition.

Also, I have sent two friends whose shoulder and neck you have fixed in record time, and have recommended you to a number of others who would like to come if some of the insurance denials could be eliminated.

Again, I thank you for your invaluable service to myself, my family and my friends.

Dear Dr. Farahmand:

This is a letter to thank you for all the help that you have been to me, my family and friends. In my case you were able to make a very bad shoulder become normal again, you relieved a very bad case of cystitis brought on by menopause, you have gotten rid of cancer sore and flu in no time, and I know we will soon have my irritable bowel syndrome completely under control. You have helped others with shoulder and knee injuries, mood disorders, bad eyesight, constipation and more. All of the above had been diagnosed and treated by regular medical doctors to no avail, and I feel you should be the insurance companies source of first resort rather than last resort, since your treatment completely eliminates the symptoms from coming back, rather than just suppressing them. Also, you have helped several people I know of with their back problems, etc. So I know that the insurance companies would save a great deal of money in the long run by including your services in those that are approved for patient's use.
