Dr. Salar's Acne (anti-parasite) Formula

**A homeopathic non-toxic anti-parasite product
That dissolves parasites and removes them from your entire body**

Dr. Salar Farahmand, founder of Encino Acu-Medical Center, has developed an effective alternative treatment for Acne and pimples on the face and body.

Parasitic infections are among the greatest causes of disease worldwide and frequently seen in children. Overall, approximately 1.5 billion humans have *Ascaris* (1, 2) making it the third most common human infection in the world. In the U.S. more than four million people are infected with different *Ascaris* species (3). Worldwide, more than 200 million people are infected with *Enterobius vermicularis* or pinworm (4).

How does one come in contact with these parasites? It is extremely easy to become infected. These parasites are transmitted not only sexually, but more frequently by drinking contaminated water, eating improperly washed fruits and vegetables, contaminated foods such as unwashed salads and raw fish (sushi) or undercooked meals. Other means of transmission include person-to-person contact (shaking hands, kissing, etc.) and walking barefoot in the sand (2). Parasite transmission from pets is also a common occurrence. Once infected these parasites can travel throughout the entire body and rob it of essential nutrients (5).

Humans can host a variety of parasites. These can range from microscopic parasites to long tapeworms. These parasites initially infest the intestinal tract, but can travel throughout the entire body. There are 197 species of parasites that inhabit the human alimentary tract and another 184 species are found in other organs (1).

Parasites residing in the digestive tract can cause weak digestion, constipation, belching, stomach pain, nausea, heartburn, rumbling, diarrhea and gas. These infections may also lead to lymph node enlargement, obesity, face and body puffiness, sugar craving, allergies acne and pimples on the face and body.

Parasite eggs can penetrate the mucous membrane of a human organ and be carried by the blood to different organs throughout the body. Contamination of the brain may lead to chronic headaches, depression, loss of hope and nervousness. Sinus contamination causes allergic type reactions such as runny nose, sneezing and itching. Lung infection causes chronic coughs, excess mucous production, shortness of breath, and asthma-like conditions. Liver infection leads to a variety of food allergies. Bladder infection by parasites causes frequent urination. Contamination of joints leads to pain and arthritis. Parasitic infection in children (children are more susceptible to infection than adults), leads to weight loss, growth problems (5) and bed-wetting in addition to all the above-mentioned ailments affecting adults.

Some of the common signs of parasite infection:

Gastrointestinal problems include anorexia, malabsorption, constipation, abdominal distention (bloating), vomiting, intestinal disorder, flatulence, bad smelling gas and stool as well as gastritis. Other symptoms may include different kinds of allergies, urticaria (itching), thrush and other lesions in the mouth, irritation and itching of the nose, frequent headaches, general aches and pains, liver or gall bladder problems, vaginal inflammations, skin problems such as pimples and acne in young adults, growth problems in young children, weight gain in adults, depression, irritation, nervousness and lack of energy such as chronic fatigue syndrome.

Benefits:

With Dr. Salar's regiment, the patients have been able to become healthy and lose weight. They are spared from conventional blood and feces tests and needless and harmful drugs. This detoxification is not limited to colon but also dissolves and removes the parasites from lungs, liver, gall bladder, kidneys, urinary tracts and in generally every organ in the body. Other advantages of this detoxification treatment are overall well-being, improved physical appearance, increased mental awareness, weight loss, and lessened food allergies. The treatment may balance *H. pylori* (microorganism) activity in the digestive tract.

Warning:

If symptoms persist/worsen or if pregnant/nursing, consult your practitioner. Keep out of reach of children. Do not use if blister is broken.
